NAME OF STUD DOG: \_\_\_\_\_

*I have been fully advised of the anticipated procedure and approve Orangevale Veterinary Hospital, Inc to perform a **vaginal insemination** on the bitch named above using the semen specified above.*

*I hereby release Orangevale Veterinary Hospital, Inc., assigned doctors, and staff from all claims, legal, or equitable, arising out of the treatment rendered, and affirm that no guarantee or assurance has been made as to the results that may be obtained. **I also understand and agree to pay for all services upon release.***

**Orangevale Veterinary Hospital makes no guarantees, expressed or implied, that conception will occur with this breeding.**

Owner Signature: \_\_\_\_\_ Date: \_\_\_\_\_

Date of Ovulation \_\_\_\_\_

Insemination Date \_\_\_\_\_

Approximate Whelping Date \_\_\_\_\_

Whelping should occur 63 days (plus or minus one day) from the date of ovulation.

If no ovulation timing was done, whelping should occur 58-72 days from the day of breeding.

Ultrasound for pregnancy is best done between 28-30 days from breeding. Date: \_\_\_\_\_  
*(It is best to make your ultrasound appointment now or as soon as you can)*

Radiographs to count puppies can be done at 55 days or later.

Start taking the bitch's temperature 10 days prior to whelping. Take the temperature three times daily and chart the results. Normal temperature in the last 2 weeks of pregnancy is 99.5-101.5.
